
Clouds disappeared!

Posted by zumanon - 2008/05/14 16:04

Hi, although I have been using winxplanet for several months I am new at the forum. For several days now I am not getting any cloud cover at all. As you can see from the attachment actually I am getting all the latest downloads but the cloud file is very small;around 8kb, which does not seem normal. Can you recommend anything? Thank you.

Hello Zumanon,
since 2 days there is a problem with the site of the University of Dundee, which is hosting all the cloud image parts. These parts are collected from a script, which is generating the cloud image for xplanet.
We have to wait, until this site is up again.

Greetings from the sunny Bremen,
Markus

Magnifique ! les nuages sont revenus !
Everything works perfectly since tonight !
Thank you Markus :)
