
No Window please help.

Posted by xenayoo - 2009/11/09 20:34

After installing Xplanet 1.2 in c:\programme, installing winXPlanetBG on desktop and doubleclicking on it i get no window. I only see different error messages like "Please choose an Application to launch", a taskbar-ikon "XPlanet starter" and a systrayikon.... that's all.

Win xp pro on a 5-Monitor-System

Edit: checked, if there is a window in an unvisible part of my screen: No.

Thank you

:blink:

Hello Xenayoo,
please try to put the winXPlanetBG.exe into the xplanet directory.

Markus
